

Project Design Phase-II

Technical Architecture:

Date	01 november 2022
Team ID	PNT2022TMID17814
Project Name	Project – Estimate Crop yield using Data analytics

TECHNICAL ARCHITECTURE:

- The data is fetched from the user and data is analyzed , pre-processed, visualized, explored etc and the data report also been created.
- Using IBM Cognos, the Data visual are been generated according to the data report which we have created using the user data.
- Thus, it can create huge change in field, crop yield estimation thus resulting profit to the farmer.
